ABOUT MUELLER
STEAM SPECIALTY

Beginning in New York City as a small specialty manufacturer servicing the valve industry, Mueller Steam Specialty incorporated in 1956 to start manufacturing pipeline strainers. Since then, the company and its product offering have expanded dramatically. The company moved to North Carolina in 1972 and due to its continued growth, moved again in 1992 to a new and larger facility in St. Pauls, North Carolina. There are now over 300,000 square feet of ISO 9001:2000 registered manufacturing space devoted to Mueller’s various product lines. In addition to a full range of pipeline and specialty strainers, the company now manufactures a broad offering of check valves and butterfly valves.

Mueller Joins the Watts Family
In December 2005, Mueller became a part of the Watts Water Technologies, Inc. family of companies. The resources and support that Watts has added to Mueller have enabled the company to consolidate previous efforts while at the same time plan for future growth and expansion in products and services.

Mueller Today
Today, Mueller Steam Specialty is the world’s largest supplier of strainers and the number one provider of specialty products serving the valve industry. While the company has seen many changes, the dedication to quality, service and delivery remains the same. As always, Mueller Steam Specialty brand strainers and valves will continue to be the premier products of their kind in the marketplace.

## ABS TYPE APPROVED STRAINERS

Includes all Mueller Steam Specialty “Y” strainers, basket strainers, duplex strainers, check valves & rubber seated butterfly valves. See ABS web site for detail: [WWW.EAGLE.ORG/TYVEAPPROVAL/CONTENTS.HTML](http://WWW.EAGLE.ORG/TYVEAPPROVAL/CONTENTS.HTML)

## SPECIAL SPECIFICATIONS

- ASTM F1199 Cast and Welded Pipeline Strainers - “Y” and basket strainers
- ASTM F1200 Fabricated Strainers

## API

- Mueller Steam Specialty Sure Check Valves conform to API 594, API 598 & 6D.
- Mueller Steam Specialty rubber seated butterfly valves conform to API 609 and MSS SP 67.
- All Mueller Steam Specialty standard butterfly valves conform to MSS SP 25 and MSS SP 55.

## PED

- Mueller Steam Specialty has PED (Pressure Equipment Directive) approval for pipeline strainners and check valves.

### FACING

#### 150 and 300 Pound

- **150 and 300 Pound Steel Flanged Strainers** are regularly furnished with a 1/16" high raised face.
- The thickness of flange dimension (dimension “C”) includes the 1/16" high raised face.

#### Bolt Holes

- Bolt holes are drilled 1/8" larger than the diameter of the bolt.
- Drilling templates are in multiples of four, so that valves or fittings may be turned to face in any quarter when installed. Bolt holes are drilled to straddle the center-line unless otherwise ordered.

- The bolt holes are spot faced.

### Bolt and Stud Lengths

- The lengths indicated as dimensions F and G in the above table apply for flanged joints made up of combinations of 150lb or 300lb valves, fittings, or companion flanges with 1/16" high raised faces.

- Stud Length “G” also applies for Tongue to Groove Flanged Joint.

### 600 Pound

- **600-Pound Steel Strainers** are regularly furnished with 1/4" high large male face. The thickness of flange dimension (dimension “C”) does not include the 1/4" high large male face.

- **FACING**

- Bolt holes are drilled 1/8" larger than the diameter of the bolt.

- The bolt holes are spot faced.

- **BOLT HOLES**

- Bolt holes are drilled 1/8" larger than the diameter of the bolt.

---

**Note:**

- The table above lists dimensions for 150, 300, and 600 pound steel standards. Each row indicates the number of bolts, diameter of the bolts, and lengths for various classes of bolts and studs.

- Dimensions in inches except where noted.

- **400 lb., 900 lb., 1500 lb. and 2500 lb. measurements on application.**

**“Y” Type Strainers**

Mueller Steam Specialty supplies customers worldwide with all of their requirements for "Y" Strainers. Whether the need is for a simple low pressure cast iron threaded strainer or a large, high pressure special alloy unit with a custom cap design, we have the "Y" strainers that fit the application.

We maintain a large stock of both standard and special sizes and materials. This stock includes end connections of threaded, flanged, socket weld, butt weld, solder, silbraze and grooved ends. We also have units with screwed caps, bolted caps, hinge type covers and swing type clamp covers.

Pressure is not a problem for Mueller Steam Specialty. "Y" strainers are available for pressures from ANSI Class 125 through Class 2500 and higher.

All of these strainers are available in a wide variety of materials. Units are maintained in stock with standard materials such as:

- Cast Iron
- 316 SS
- Monel
- Bronze
- 304 SS
- Ductile Iron
- 316L SS
- Hastelloy
- Carbon Steel
- Alloy 20

**Our Screens & Baskets are Designed to Achieve Maximum Straining Efficiency**

The most critical aspect to any strainer is straining efficiency and durability. Mueller Steam Specialty’s many years of experience and continuous improvements provide the highest quality. We carry a larger inventory of perforated metals and meshes than any other strainer manufacturer in the world. Besides standard metals, we carry thousands of variations of materials and openings. Openings range from 1” to 5 microns.

Mueller Steam Specialty "Y" strainers have generously proportioned bodies with screens that have an open area many times greater than the corresponding pipe size to insure low pressure loss. All strainers are hydrostatically tested in accordance with applicable ANSI, API and MSS standards.
**BASKET TYPE STRAINERS**

Mueller Steam Specialty Simplex Basket Strainers are called for when the application requires a strainer with an extremely large capacity. Most of these strainers have an open area ratio of 6 to 1 with even greater open area ratios available.

As with all of the Mueller Steam Specialty strainers, basket strainers are available in an almost endless combination of materials, pressures, end connections and cover configurations from ¼” to 24” (72” in fabricated units). Units are also available in cast iron, bronze, carbon steel, stainless steel, Alloy 20 and most other alloys. The baskets in the Mueller Steam Specialty simplex basket strainers share the same quality of construction as the Mueller Steam "Y" strainers.

From threaded end connections to offset flanged connections, we can provide the exact basket strainer to meet your needs.

DUPLEX STRAINERS

Many times, critical systems cannot be shut down for strainer basket cleaning. These systems include cooling water, compressors, condensers, fire lines, fuel lines, chemical process systems, pump suction applications and other similar services. For these applications, the Mueller Steam Specialty Duplex Strainer is the perfect choice.

For sizes ¾” through 6”, the Revolutionary Ball-Plex™ duplex strainer from Mueller Steam Specialty has all of the features you need. Bubble tight seating, true in-line maintainability, extremely easy seat replacement and long, trouble-free service life in a very simple and rugged design.

Available from stock in cast iron, bronze, carbon steel and stainless steel. Other alloys are also available.

All of the Ball-Plex™ units are standard with 316 SS balls and PTFE seats. Other alloys are also available for the balls.

Threaded and flanged units are available with full rated pressures from Class 125 to Class 300 (Class 600 flanges also available). With the floating ball design and relatively low torque requirements, it is very easy to automate these units for remote operation.

For sizes from 8" - 24" (200 - 600mm), the larger Mueller Steam Specialty duplex strainer is the unit of choice. Using an in-line plug design, quick flow transfer is accomplished with less than a 90° rotation of the handle. Economical actuation of the unit is also available.

Sizes 8" - 16" (200 - 400mm) are available in cast iron, bronze, carbon steel and stainless steel and Class 125 and 150.

Sizes 18" - 24" (450 - 600mm) are fabricated. All units can be supplied with special materials, baskets and coatings.

**HOW TO ORDER**

Mueller Steam Specialty Ball-Plex™ Duplex Strainer basic model numbers are based on ANSI Class connections as follows:

- 791 for Class 125  
- 792 for Class 150  
- 794 for Class 300  
- 796 for Class 600

For Marine and other larger styles:

- 690 for 50psi (marine duplex with Class 125 flanges)  
- 691 for Class 125  
- 692 for Class 150

**EXAMPLE**

Three inch Model 791S-AH (see above) with some special feature such as special baskets, blow-off connections, special O-rings, etc.

This is a Class 125 duplex strainer with NPT Ends, cast iron body and covers, stainless steel balls. The ordering and tagging number is written as follows:

```
Model # Code Example 3.0 791 S A H X
Pipe Size  Model No End Body Ball Special Feature
```

Consult factory for all special features. If no special features are required use “O” in place of “X” in the ordering and tagging number.

SPECIAL STRainers

FIRELINE STRainers

U.L. approved strainers for fireline service are designed specifically for applications such as automatic water sprinklers and spray systems in firelines. The very large open area ratio helps prevent problems due to clogging of the screen. These units are available with open areas up to seven times the corresponding pipe size. This exceeds the AWWA requirements by almost 200%.

Whether the need is for a "Y" strainer or a basket strainer, Mueller cast iron fireline strainers from 2½" to 12" can meet your needs.

MODEL 595
CLASS 125
Cast Iron
Flanged Ends,
U.L. Approved for Fireline Service
Size: 4" - 12" (100 - 300mm)
175psi WOG @ 150°F
12 bar @ 65°C

MODEL 911U
CLASS 125
Cast Iron
Flanged Ends
U.L. Approved for Fireline Service
Size: 2½" - 12" (65 - 300mm)
175psi WOG @ 150°F
12 bar @ 65°C

METER STRainers

When expensive displacement water meters and other sensitive fluid monitoring devices need to be protected from damage due to particles and debris in the line and space is a problem, the Mueller Steam Specialty meter strainers are the solution.

These units have been designed to meet AWWA requirements of a straining area at least twice the size of the main meter case inlet of turbine type meters.

Available in cast iron and bronze from 1½" to 8", these units are designed to eliminate your meter protection problems.

MODEL 625
CLASS 125
Cast Iron
Flanged Ends, Bolted Cover,
Size: 3" - 8" (80 - 200mm)
175psi WOG @ 150°F
12 bar @ 65°C

MODEL 625-B
CLASS 150
Bronze
Flanged Ends, Bolted Cover
Size: 1½" - 8" (40 - 200mm)
175psi WOG @ 150°F
12 bar @ 65°C

FABRICATED STRainers

Mueller Steam Specialty has a long history of providing the highest quality, economical fabricated strainers to meet every need.

Whether the requirement is for a basket strainer, large "Y" strainer, "Tee" type strainer, temporary strainer or large duplex strainer, Mueller will custom engineer and fabricate the exact strainer required.

Some of the special features available include:
- Special Dimensions
- Special Baskets
- Special Covers (Lifting Davits, Quick Opening etc.)
- Special End Connections
- Special Corrosion Allowances
- Special Draining and Cleaning
- Special Certifications:

The Mueller Steam Specialty Pump Protection Package is a compact, effective and economical way to simplify the maze of piping found in most pump locations.

Our Control-Chek® valve has been specifically designed to incorporate balancing, shut off and check valve functions into one compact, easily installed unit. This saves space, installation cost and maintenance time.

The Suction Diffuser does more than just strain out particles that could damage your pump. By replacing the elbow, strainer and entry pipe on the suction side of the pump, a tremendous saving in space, equipment and labor will be realized. Our Control-Chek® and Suction Diffuser, together with an inlet control valve, can replace up to six costly, space-robbing pipe components. That does not include the savings due to fewer welds, hangers, flanges, ease of maintenance and improved access in the mechanical room. Both units are also available in our LOXEND® line (See page 27).

CHEXTER® CHECK VALVE

The CHEXTER® Check Valves are designed to be used economically in a variety of commercial and industrial applications - including commercial construction, industrial, marine, utilities and process industries.

CHEXTER® Check valves meet the requirements of, and are approved for use by:

- General Services Administration
- U.S. Navy, the U.S. Coast Guard, U.S. Air Force and NASA
- Utility industry requirements for performance-Water, gas and compressed air lines

The CHEXTER® Check valve may be outfitted in a broad combination of metal trims allowing quick selection of the right valve for your application.

Facing: Raised Flange
- Size: 2" - 24" (50 - 600mm)
- 1480psi WOG @ 100°F
- 102 bar @ 38°C

#### MODEL 1605-AF
**CLASS 600**
Carbon steel body/Metal-to-metal seal
Facing: Raised Flange
- Size: 2" - 24" (50 - 600mm)
- 1480psi WOG @ 100°F
- 102 bar @ 38°C

#### MODEL 1605-C
**CLASS 600**
316 SS body/Teflon seal
Facing: Raised Flange
- Size: 2" - 12" (50 - 300mm)
- 1480psi WOG @ 100°F
- 99 bar @ 38°C

#### MODEL 1606-A
**CLASS 900**
Carbon steel body/Buna-N seal
Facing: Raised Flange
- Size: 2" - 12" (50 - 300mm)
- 2120psi WOG @ 100°F
- 146 bar @ 38°C

#### MODEL 1606-AC
**CLASS 900**
Carbon steel body/Teflon seal
Facing: Raised Flange
- Size: 2" - 12" (50 - 300mm)
- 2120psi WOG @ 100°F
- 146 bar @ 38°C

#### MODEL 1606-AF
**CLASS 900**
Carbon steel body/Metal-to-metal seal
Facing: Raised Flange
- Size: 2" - 12" (50 - 300mm)
- 2120psi WOG @ 100°F
- 146 bar @ 38°C

#### MODEL 1606-C
**CLASS 900**
316 SS body/Teflon seal
Facing: Raised Flange
- Size: 2" - 12" (50 - 300mm)
- 2010psi WOG @ 100°F

Mueller Steam Specialty has redesigned our Silent Check Valves in order to offer better flow efficiency, lower pressure drop and improved cost. Designed with compact springs, the valve prevents flow reversal to eliminate water hammer, vibrations, system surges and noise. These units can be installed horizontally or vertically. Please consult factory for vertical downward flow applications.

The latest Mueller Wafer Silent Check Valve keeps the traditional design for short face-to-face dimensions and fits conveniently between two matching flanges, easily replacing our existing 100 Series wafer silent check valves. Now with a more simplistic design, parts are easily field repairable or replaceable without special tooling.

The 92M, 94M and 96M series wafer checks are suitable for normal liquid, air and gas applications. These units are available in ductile iron, bronze, carbon steel and stainless steel, all with stainless steel trim as a standard.

94 SERIES WAFFER CHECK

**MODEL 92M-IP**
- Ductile Iron body, Bronze Trim
- Size: 1” - 10” (25 - 250mm)
- 250psi WOG @ 100°F / 17 bar @ 38°C

**MODEL 92M-HT**
- Stainless Steel body, Stainless Steel Trim
- Size: 8” - 12” (200 - 300mm)
- 275psi WOG @ 100°F / 19 bar @ 38°C
For use with Class 150 or 300 flanges

**MODEL 94M-IT**
- Ductile Iron body, Stainless Steel Trim
- Size: 2” - 10” (50 - 250mm)
For use with Class 150 or 300 flanges

**MODEL 94M-IP**
- Ductile Iron body, Bronze Trim
- Size: 8” - 10” (200 - 300mm)
- 640psi WOG @ 100°F / 44 bar @ 38°C
For use with Class 150 or 300 flanges

**MODEL 94M-HT**
- Stainless Steel body, Stainless Steel Trim
- Size: 1” - 10” (25 - 250mm)
- 720psi WOG @ 100°F / 50 bar @ 38°C
For use with Class 150 or 300 flanges

**MODEL 96M-DT**
- Carbon Steel body, Stainless Steel Trim
- Size: 1” - 6” (25 - 150mm)
- 1480psi WOG @ 100°F / 102 bar @ 38°C
For use with Class 600 flanges

**MODEL 96M-HT**
- Stainless Steel body, Stainless Steel Trim
- Size: 1” - 6” (25 - 150mm)
- 1440psi WOG @ 100°F / 99 bar @ 38°C
For use with Class 600 flanges

**FEATURES:**
- Units fully ANSI rated.
- Consistent cracking pressure: .5psi net
- Unique check valve seal is independent of flange gasket.
- Disc travel full open is approximately 1/4” per inch of valve size.
- Metal-to-metal seat meets or exceeds API 598 leakage requirements.
- Soft seat provides bubble tight shut off at as low as 5 ft. of water head.
- Simple design enables field parts replacement without special tools.
- PN16, PN25 and PN40 flange drilling available.
Mueller Steam Specialty Silent Check Valves are designed with a spring assisted in-line disc that is guided both upstream and downstream. This design feature allows valve closure at zero flow. Flow reversal does not occur and check valve induced water hammer is eliminated.

The Mueller Wafer Silent Check Valve is designed with a short face-to-face dimension and fits conveniently between two matching flanges. Only a limited amount of space is needed for installation and installation time is reduced. The valves are used in a variety of liquid, air and gas applications. These units are available in cast iron, bronze, carbon steel, stainless steel and other alloys.

SILENT CHECK VALVES – GLOBE STYLE

With the same design features as the wafer silent check valves, the Globe style valves offer a more streamlined flow and lower pressure drop figures.

The valves are designed for liquid, air and gas service* and are available in a complete range of sizes, body trim materials and pressure classes. These valves are engineered to be partially open at 0.5psi and fully open at 1psi differential pressure at a liquid velocity of 8 feet per second.

Mueller Globe Style Silent Check Valves can be installed in horizontal or vertical flow. Each valve is 100% tested in accordance with ANSI, API and MSS standards.

The unique torsion spring arrangement on this valve forces the heel of the discs against the seat for a complete seal. It also helps close the disc on flow stoppage, minimizing flow reversal and water hammer.

Elastomer seats for each disc are molded to the body allowing complete sealing. Metal-to-metal seating is also available on request. The dual shaft design provides a positive disc stop. This feature minimizes flutter and wear at the disc hinge and maximizes the life of the valve.

All steel, stainless steel and alloy models conform to API 594 and API 6D specifications. (Also available as LOXCEND. See pages 27 & 28)

The Sure Check valves are designed for horizontal and vertical flow applications. Units are available in cast iron, ductile iron, carbon steel, stainless steel and other alloys.

Mueller Steam Specialty Butterfly Valves are designed for ANSI Class 125/150 flanges and in compliance with MSS-SP-25, MSS-SP-67, API-609 and MIL-V-22122C ships, Type 1, Classes A-D. MSS Butterfly Valves are also approved by the American Bureau of Shipping (ABS).

All valves are 100% factory tested to guarantee bi-direction, drop tight shutoff at full rated pressure.

The Mueller Steam Specialty Butterfly Valve offers numerous features, such as blow out proof stems, primary and secondary stem seals and multiple combinations of materials and configurations.

Our butterfly valve requires no modifications for vacuum service (Models 51, 52, 51M, 52M, 53 & 58).

Ease of repair and actuation are just a few more reasons why Mueller Steam Specialty is an industry leader.

For fast and economical installation of piping systems, grooved end equipment is often specified. The Mueller Steam Specialty LOCXEND® family of products is the economical choice. With over 60 years of experience in flow control products, Mueller Steam Specialty has designed and produced a complete line of grooved end pipeline products. This line includes the Sure Check® check valve, the Mueller butterfly valve, pump protection products (Control-Chek® combination valve and the suction diffuser) and both "Y" and Tee strainers.

As with all Mueller products, the LOCXEND® products are 100% hydrostatically tested so that our customers are assured of consistent high quality materials and construction.

**Important:** To assist you in ordering the proper LOCXEND® product for your application, the following information is necessary: operating pressure, temperature, flow rates and/or velocity and the type of pump used in the installation. If special screens are required for suction diffusers, “Y” Strainers or “Tee” Strainers, the particle retention size should be specified. Advise factory when corrosive fluids are involved.
