Pioneers in Diaphragm Valve Technology

P. K. Saunders invented the original diaphragm valve in 1928. Since then, we have developed our range through innovative design by using the latest materials technology and our extensive Polymers technology know-how. As a result, Saunders diaphragm valves have gained an excellent reputation for versatility and reliability establishing a presence in every process industry sector.

Today, Saunders® is an international leader in the design, development and manufacturing of diaphragm valves. As part of Crane Co, a diversified global manufacturer of engineered industrial products, Saunders has a strong worldwide presence via dedicated sales companies and distribution partners.

History of Innovation
Saunders® has led the way in the development of the diaphragm valve to meet the ever increasing demands of industrial applications. These innovations have included the introduction of:

- First PTFE diaphragms
- First supplier of glass and fluorocarbon linings
- First non-bonded PTFE diaphragm
- First compact pneumatic actuators
- First 3 layer diaphragm for corrosive-gas applications
- First modified PTFE diaphragm
- Introduction of the XA diaphragm (resistant to both chemical and abrasive attack)

A Continuing Story of Success

Millions in service
Saunders diaphragm valves are used in every process industry. Millions of Saunders diaphragm valves are currently installed in process plants around the world and they are renowned for versatility and reliability.

Dependable operation
Engineers know they can trust Saunders Valves. They set the industry standard for dependable, consistent operation, even in the most adverse conditions with years of trouble-free performance.

Customer Service
Customers know they can depend on Saunders for after sales service and technical support from one of our many locally based sales associates and distribution partners.

The Science Inside
Saunders proudly develops and manufactures its polymer compounds, with more than 80 years of polymer technology. It is “The Science Inside™” our valves which sets us apart.

Global Compliance
Saunders diaphragm valves are fully compliant to all global standards.

Key Diaphragm Valve Features

1. Full closure even with solids present
2. Only two wetted parts
3. Wide range of linings and diaphragms to suit most applications

Key Diaphragm Valve Benefits

1. Leak tight* by design
2. Minimal maintenance
3. Better resistance to corrosion/abrasion and longer life

*in accordance with standards MSS SP-88 and BS EN 12266-1
DIAPHRAGM VALVES KEY PRODUCTS

A Type Weir Design for Corrosive Media and Utilities

- Versatile and extensively used in industrial applications
- Can handle up to 15% solids (depending on process conditions)
- Perfect valve for on/off or control applications on corrosive processes

KB & K Type Straight Through Designs for Solids Handling

- Smooth, straight-through design
- High flow capacity
- Can handle highly abrasive fluids

WFB For Marine and Fire Applications

- Weir type valve for fire fighting, tank cleaning or wash down on land or sea
- Guaranteed operation even after years of being static
- Fire tested diaphragm

NX Check Valve

- Low pressure and vacuum duties
- Unidirectional full flow design
- Corrosion resistant linings

Actuation - Modular or Compact Actuators

- Different actuator types that cover up to DN250
- Wide range of line and operating pressure options
- Conceived to withstand the most adverse conditions

In-house Manufacture of All Diaphragms

- Vulcanized layers with high strength woven reinforcement in elastomer-based diaphragms
- Range of PTFE-type diaphragms for critical applications
- Innovative compounding based on extensive polymer knowledge

“We specified Saunders WFB 65mm nominal bore fire-mains hydrant valves for our ferries and cruise liners. Significant factors behind this choice are the excellent reliability and the low maintenance costs.”

P&O Cruises (UK) Ltd

“We are pleased to inform that we are using Saunders in our Runcorn chlor-alkali and chlorine derivatives plants. We are very satisfied with the product’s reliability, low maintenance costs and with the quality of the technical service. We hope to get the same support in all our future supplies/requirements.”

INEOS ChlorVinyls (UK)
DIAPHRAGM VALVES WHY DIAPHRAGM VALVES?

1. **Corrosion Resistance**
Saunders lined valves are the first choice for corrosion resistance applications. We offer an extensive range of linings and diaphragms to suit most applications. This wide choice of body lining and diaphragm materials provides an effective and economical solution to your application by avoiding the use of exotic alloys. Our extensive range of valve options include elastomer and fluoropolymer linings, designed especially to combat corrosion.

2. **Abrasion Resistance**
Saunders polymer technology provides superior abrasion resistance. The KB straight through valve will handle up to 100% solids and with the use of a soft rubber diaphragm, will still give tight shut-off, in accordance with standards MSS SP-88 and BS EN 12266-1.

3. **Leak Tight**
On pressure and vacuum services, Saunders diaphragm valves operate and close *100% leak tight, in accordance with standards MSS SP-88 and BS EN 12266-1*, even after thousands of operations, reducing processing and handling costs, by eliminating emissions normally associated with other valve designs.

4. **Operating mechanism not in contact with line media**
All working parts of the valves are isolated from the line media and positive closure is obtained even on frequent cycling or with entrained particulates in the line unlike other valve types.

5. **Easy Maintenance**
Three part design allows maintenance and actuator retrofitting without removing the valve body from the pipeline. Overall this results in lower cost of ownership compared to other valve types.

6. **Suitable for Control**
Throttling and control characteristics are enhanced by a streamlined flow path that is cavity free and provides excellent flow control capabilities.

7. **Cost Effective**
The body remains in the pipeline during service and it takes only minutes to change a diaphragm, resulting in significant down time savings at site.

8. **Valve usable in any Position Self Drain**
The Saunders valve can be installed in any position without affecting its operation. However, we recommend installation to be at least 6 times the pipe diameter from bend or pump (10 times the pipe diameter if the valve is used for control).
Saunders offers a comprehensive range of diaphragm valves for any industry. They encompass the full spectrum of corrosive and abrasive applications that require reliable valve operation. Easily maintained to ensure many years of trouble free operations, Saunders diaphragm valves have become a standard in industries such as chemical production, mining, water treatment, fertilizers and marine to name a few.

*in accordance with standards MSS SP-88 and BS EN 12266-1

www.cranecpe.com
DIAPHRAGM VALVES APPLICATIONS

CORROSIVE

Corrosion is estimated to cost worldwide industry more than 300 billion dollars every year. Saunders lined diaphragm valves are the best option to handle these media.

C = Corrosive, A = Abrasive, G = General Applications

(1) Glass is not suitable for applications hydrofluoric acid and applications with high thermal amplitude or thermal cycling
(2) Chemical etching may occur when in contact with hydrofluoric acid and alkali. Please contact Saunders for precise recommendations.
(3) The Ultimate XA Diaphragm was specially developed for highly corrosive and abrasive applications.
(4) Used primarily as water hydrant valves.
(5) Used in copper or stainless steel piping in water, oxygen and other gases.
At Saunders we apply rigorous quality control measures at every manufacturing step of our polymer materials. For many years we have developed our expertise and accumulated experience in the production of our own diaphragms and valve linings. As a result, our valves can handle the most challenging fluids with total security. The name Saunders is synonymous with innovation, continuous product development and high standards of quality control.

**Diaphragm Construction**

- Appropriate choice of the finest raw materials and fabric reinforcements.
- Diaphragms constructed with multi-layers of rubber and reinforcement for maximum performance and durability.
- Studs attached with bonding adhesive and mechanical anchorage.
- Dual sealing ribs (across the weir and around the diaphragm periphery) for enhanced leak tight sealing capabilities and lower closure torque.
- Optimised thickness of diaphragms for superior flexing properties.

**PTFE Diaphragm**

Two-piece diaphragm construction - PTFE face, with reinforced rubber backing to increase pressure rating and durability.
Saunders® Data Sheets

CDs are available for fast and accurate detailed information on the industrial valve range Saunders® has to offer. Contact your local sales office or distributor for details on how to order your CD.

The electronic data manual contains over 100 individual technical data sheets to assist you with the selection of the valve.

Data Sheet Index and typical valve information

The Saunders Material Selection Database software is available which lists over 1,000 process chemicals.

QUALITY STATEMENTS AND APPROVALS

CERTIFIED QUALITY FROM CRANE FLOW SOLUTIONS

- Quality Management system registered to ISO 9001 standard in which our R & D and manufacturing process are optimized to maintain our product quality and service.
- TÜV-Merkblatt HPO Qualification for our product manufacturing and certification.
- International product approval from authorities such as Bureau Veritas, Lloyds.
- Polymer/Rubber materials certified as meeting the requirements of FDA, USP & WRAS.

DIAPHRAGM VALVES TYPE A (WEIR)

Original Saunders Design

- Hand wheel sized for comfortable grip and easy operation
- Lubricated for long life, and protected from dust, dirt, moisture and atmospheric contaminants
- Yellow valve indicator provides visual indication of the position of the valve
- Compressor provides support to the diaphragm in all positions, improving the life of the diaphragm
- Diaphragm replaceable with valve inline
- Reinforced diaphragms give long life and leak free operation
- Wide range of body materials available
- Paint finish resists environmental attack
- Wide choice of diaphragm materials which isolates all bonnet working parts from the line fluid
- Screwed, Flanged or Welded end connections to various international standards
- Different lining options available to handle all kind of fluids

Saunders A type: the valve of choice to handle highly corrosive media
DIAPHRAGM VALVES TYPE A BODY

**Body Lined and Unlined option**

Our metal bodies provide simultaneous mechanical support for the lining and a protection for the lining against Ultraviolet (UV) attack. Saunders lining thicknesses range from 1 to 4.5mm (DN15-DN350) depending on lining material (glass 1 mm; rubber and plastic 3 to 4.5 mm).

### Glass **

- Cast Iron
  - Body Material: GJL-250 -10°C to 175°C
  - Body Material: GJL-450-10 -10°C to 175°C
  - Body Material: GJL-600-18 -10°C to 175°C

### Plastic Lining

- **PFA** Perfluoroalkoxy – Excellent suitability for concentrated strong acids at high temperature, aromatics, aliphatic and chlorinated solvents. (White colour)
- **ETFE** Polytetrafluoroethylene – Suitable for strong acids, salts in water, solvents at medium temperature. ETFE has the highest abrasion resistance of all the Fluorocarbon linings. (Red colour)
- **PP** Polypropylene – Economic solution for mineral acids, salts in water, water and effluent treatment chemicals; (Light grey colour)
- **PVDF** Polyvinylidene Fluoride – Suitable for mineral acids, salts in water, water and effluent treatment, additionally it is the best solution for Chlorine gas wet or in water. (Black colour)

### Rubber Lining

- **HRL** Hard Rubber (Ebonite) – Used for salts in water, diluted acids, de-ionised water, plating solutions and potable water. HRL has better chemical resistance than SRL. (Black colour)
- **Butyl** Isobutylene Isoprene – Great for corrosion & abrasion slurries, and acidic slurries. Additional applications are salts in water, diluted acids and alkali and lime. (Black colour)
- **Polychloroprene** Polychloroprene – Perfect solution for a combination of abrasive slurries containing hydrocarbons, sludge oils and also sea water. (Black colour)
- **Soft Rubber** Polyisoprene (Natural Rubber) – High abrasion resistance on powders, abrasive slurries, clays, coal dust, dry fertilizers, gypsum, as well as titanium dioxide and sewage. (Red colour)

*The temperature ranges above are given for general reference purposes only. Service conditions, such as media being handled and concentration of solids will determine the highest possible working temperature. Additionally, the performance of the valve will also depend on the diaphragm material.*
DIAPHRAGM VALVES TYPE A DIAPHRAGM

How to identify your diaphragm
Manufacturing information

![Image of diaphragm parts]

**Grade identification**
- **Back**: Week, Year
- **Wetted Face**: Size

*In the range of PTFE diaphragms, Saunders offers both moulded open and closed (214S/425) and moulded open (214/425) for your convenience. Moulded closed 214S has been specifically designed to reduce polymeric creep, increasing the sealing properties and life of the diaphragm.*

**PTFE Diaphragm**

- **214/300** - Used in strong acids and alkali, salts in water at high temperature. Sulphuric acid is a good example with temperatures up to 110°C and concentrations up to 96%.
- **214/425** - Typical applications are strong acids. Alkalis and salts in water at high temperature. Constant steam is also another important application.
- **214/226** - Strong acid, diluted chlorine, bromine solutions at low concentration.
- **214S/425** - Strong acids, diluted chlorine, bromine gas and Chlorinated solutions.
- **237** - The best solution for sodium hypochlorite. Great with strong acids and low concentration chlorine gas. It is also oil resistant.
- **XA** - Specifically designed for both abrasive and corrosive applications such as phosphoric acid, metal treatment, mining applications.

**Rubber Diaphragm**

- **237** - Ethylene Propylene (EPM) - Suitable for abrasive slurries containing hydrocarbons.
- **226** - Great solution for hydrogen at high temperature, concentrated acids, aromatics solvents, low concentrated chlorine solutions, ozone, unleaded petroleum.
- **C & CV** - Lubricating oil, cutting oils, paraffin, animal vegetable oils, aviation’s kerosene at low temperatures. CV is ideal for vacuum applications, where oils are present, (compressed air, acetylene gas, LPG).
- **Q** - Salts in water, diluted acids and alkalis and abrasive applications.

**Corrosion & Chemical Resistance**

- Salts in water, acids and alkalis, ozone, water, intermittent steam. Great solution for food and beverages applications. FDA and USP approved.
- Chemicals, diluted acids and alkalis, drinking water. Additional abrasive applications like phosphoric acid with low concentration. FDA, USP and WRAS approved.
- Suitable for abrasive slurries containing hydrocarbons.
- Great solution for hydrogen at high temperature, concentrated acids, aromatics solvents, low concentrated chlorine solutions, ozone, unleaded petroleum.
- Lubricating oil, cutting oils, paraffin, animal vegetable oils, aviation’s kerosene at low temperatures. CV is ideal for vacuum applications, where oils are present, (compressed air, acetylene gas, LPG).
- Salts in water, diluted acids and alkalis and abrasive applications.

All rubber diaphragms have threaded brass fixings, except vacuum diaphragm (Cv, 300v), which have steel fixings. PTFE diaphragms have a stainless steel bayonet fixings.

DIAPHRAGM VALVES TYPE A TOP WORKS

Top Works

Standard Range
- Rising Handwheel
  - Valves sizes: DN8 to DN10 (1/4” to 3/8”)
- Cast iron bonnet with rising plastic handwheel
  - Valves sizes: DN15 to DN50 (1/2” to 2”)
- Cast iron bonnet with rising metal handwheel
  - Valves sizes: DN15 to DN150 (1/2” to 6”)
- Rising Handwheel with indicator (simple padlocking)
  - Valves sizes: DN15 to DN150 (1/2” to 6”)
- Standard Non-Rising Handwheel without indicator
  - Valves sizes: DN200 to DN350 (8” to 14”)
- Non-Rising Handwheel with indicator
  - Valves sizes: DN200 to DN350 (8” to 14”)

High Performance
- Fluoroelastomer sealed padlocking
  - Valves sizes: DN15 to DN150 (1/2” to 6”)
- Fluoroelastomer sealed bonnet
  - Valves sizes: DN15 to DN150 (1/2” to 6”)

Saunders Actuation
- EC actuators (spring close/spring open/double acting)
  - Valves sizes DN8 to DN50 (1/4” to 2”)
- ECX actuators (spring close/spring open/double acting)
  - Valves sizes DN65 to DN150 (2 1/2” to 6”)
- ESM/ES actuators (spring close/spring open/double acting)
  - Valves sizes DN15 to DN250 (1/2” to 10”)

Note: Designs may vary across size range

Note: For temperature rating, please refer to adjacent graphs.

All Saunders valves are pressure tested in accordance with BS EN12266-1 standard.
- Shell test: 1.5 times max rating working pressure
- Seat test: 1.5 times max rating working pressure

**When lined body is cast steel, minimum temperature is -22°F-30°C.
When DI Grade EN-GJS-400-18-LT is used, minimum temperature is -4°F-20°C.
** Depends on body substrate material.
† 214S Moulded closed version only.
**Saunders KB Design**

Hand wheel sized for comfortable grip and easy operation

Lubricated for long life, and protected from dust, dirt and atmospheric contaminants

Double Threaded stem reduces handwheel turns

Diaphragm replaceable with valve in line

Paint finish resists environmental attack

Resilient diaphragm handles abrasives and suspended particles in the line, but still provides positive shut-off and isolates all bonnet working parts from the line fluid

Reinforced diaphragms give long life and leak-free operation

Yellow valve indicator provides visual indication on the position of the valve

Smooth non-turbulent body design for unrestricted flow and minimum pressure drop

Body lining including glass and a wide range of elastomers

Screwed and flanged options in a wide range of body materials

Saunders type K & KB high flow valves: the choice for corrosive slurry applications
DIAPHRAGM VALVES TYPE KB/K BODY

Body Lined and Unlined option

Saunders full bore KB type diaphragm valves, with their smooth non-turbulent body design, have proven to be outstanding in resisting the erosion effect of abrasive media, providing low pressure drop and high flow characteristics.

The flexible diaphragms ensure consistent leak tightness even when solids, powders and dry media are present. The wide range of lining materials make the valve suitable for many corrosive/abrasive applications (up to a maximum pressure of 10 bar.)

* Lower temperature limit is dependant on body substrate material.
** Glass is not suitable for applications where thermal cycling occurs.

### Rubber Lining

**Butyl Isobutylene** — Great for corrosive & abrasive slurries, and acidic slurries. Additional applications are salts in water, diluted acids and alkali and lime; (Black colour). WRAS Approved.

**Polychloroprene** — Perfect solution for a combination of abrasive slurries containing hydrocarbons, sludge oils and also sea water. (Black colour)

**HRL Hard rubber (Ebonite)** — Used for salts in water, diluted acids, de-ionised water, plating solutions and potable water. HRL has better chemical resistance than SRL; (Black colour)

**Soft Rubber Polyisoprene** — High abrasion resistance on powders, abrasive slurries, clays, coal dust, dry fertilizers, gypsum, as well as titanium dioxide and sewage. (Brown colour)

The temperature ranges above are given for general reference purposes only. Service conditions, such as media being handled and concentration of solids will determine the highest possible working temperature. Additionally, the performance of the valve will also depend on the diaphragm material.

Lining thickness depends on lining and size. Please contact us for full availability details.
Diaphragm

Many factors can accelerate the ageing effects of polymer compounds. Temperature and abrasion have a significant impact on the effect of chemicals on rubber compounds. At Saunders we are proud of our core competence, the in-house manufacture of Saunders diaphragms. Our know-how in polymer science assures the best range of diaphragms to suit the most challenging duties with total security. This explains why Saunders diaphragms are a synonym of longer life, reduced maintenance and higher plant operating efficiencies.

Manufacturing information

Fluoroelastomer

226 - Great solution for hydrogen at high temperature, concentrated acids, aromatics solvents, low concentrated chlorine solutions, ozone, unleaded petroleum.

300 - Chemicals, diluted acids and alkalis, drinking water. Additional abrasive applications like phosphoric acid with low concentration. FDA, USP and WRAS approved[^1].

HT - Suitable for abrasive slurries containing hydrocarbons.

425 - Salts in water, acids and alkalis, ozone, water, intermittent steam. Great solution for on food and beverages applications. FDA and USP approved[^2].

Rubber Diaphragm

237 - The best solution for sodium hypochlorite. Great with strong acids and low concentration chlorine gas. It is also oil resistant.

XA - Specifically design for both abrasive and corrosive application such as phosphoric acid, metal treatment and mining applications.

C - Lubricating oil, cutting oils, paraffin, animal vegetable oils and aviation kerosene at low temperatures.

AA - Excellent choice on abrasive applications such as slurries or dry powders. The diaphragm has a light brown colour, and is sulphur cured.

[^1]: FDA - Food & Drug Association  
[^2]: USP - United States Pharmacopeia  
WRAS – Water Regulations Advisory Scheme

DIAPHRAGM VALVES TYPE KB/K TOP WORKS

Top Works

Standard Range

- Standard Plastic Rising Handwheel with indicator
  Valves sizes: DN15 to DN50
  (1/2" to 2")

- Metal Rising Handwheel with indicator
  Valves sizes: DN15 to DN150
  (1/2" to 2")

- Standard Non-Rising Handwheel without indicator
  Valves sizes: DN200 to DN350
  (8" to 14")

- Non-Rising Handwheel with indicator
  Valves sizes: DN200 to DN350
  (8" to 14")

High Performance

- Non-Rising Handwheel (fluoroeastomer sealed)
  Valves sizes: DN15 to DN300
  (1/2" to 12")

- Rising Handwheel with indicator (simple padlocking)
  Valves sizes: DN15 to DN150
  (1/2" to 2")

Saunders Actuation

- ESM/ES actuators (spring close/spring open/double acting)
  Valves sizes DN15 to DN250
  (1/2" to 10")

Manual Valves Working Pressure & Temperature

Maximum manual working pressures for KB Type Saunders Diaphragm valve. For ES actuators, please refer to appropriate actuator performance selection technical data sheets.

All Saunders valves are pressure tested in accordance with BS EN12266-1 standard.
- Shell test: 1.5 times max rating working pressure
- Seat test: 1.1 times max rating working pressure

For more details on actuation see pages 17-20
DIAPHRAGM VALVES ACTUATION

Original Saunders ES Modular Design

- Optional hand wheel, Spring Close (SC) and Spring Open (SO) models
- Emergency override is standard on SC and SO
- Easy installation of accessories
- Clear visual indication of actuator position
- Polyester powder paint finish as standard for high corrosion resistance to external environment
- The master spindle and spindle attachment are protected from the outside environment throughout its travel.
- Inter-changeable modular bonnets for flexibility (offered as a kit including compressor and spindle)
- Saunders offers natural rubber and nitrile operating diaphragms. For optimum performance, diaphragms are manufactured in-house by Saunders
- The cylinder is lightweight cast aluminium for more economical installation and exceptional corrosion resistance
- Easy to fit or retrofit on both weir and straight through valves

Wide range of actuators that provide reliable remote control
**DIAPHRAGM VALVES ACTUATION**

**Saunders Actuators - Model Range and Options**

When manual operation is inadequate or inconvenient, Saunders offer a variety of actuators covering valve sizes up to DN250, for different line and operating pressure options. We offer three different actuators, designed for various characteristic performances.

### Modes of Operation

<table>
<thead>
<tr>
<th>Failsafe Closing</th>
<th>Failsafe Opening</th>
<th>Double Acting</th>
</tr>
</thead>
<tbody>
<tr>
<td>Failsafe closing actuators close the valve against line pressure in the event of failure (or intended shutoff) of operating pressure to the actuator.</td>
<td>Failsafe opening actuators open the valve to allow line fluid to flow in the event of failure (or intended shutoff) of operating pressure to the actuator.</td>
<td>Operating pressure opens and closes the valve.</td>
</tr>
</tbody>
</table>

- **Normal Use:** When valve is usually in the closed position (to avoid using a constant supply of operating pressure).

### Key Features ES Modular Actuator

1. Modular design for flexibility
2. Adjustable spring tension to optimize closure force and maximizes diaphragm life
3. Full range of accessories
4. Light weight Silicon Aluminium housings
5. Polyester coating for environmental protection

### Key Features EC Actuator

1. Compact piston style actuators
2. Versatile and robust design
3. Composite material
4. Temperature range of -10°C to 100°C ambient (autoclave maximum 150°C)
5. Spring packs to suit pressure requirements.

### Key Features ECX Actuator

1. Compact extension to the EC size range
2. Comprehensive spring packs for a wide range of pressure
3. Full range of accessories
4. Light weight Silicon Aluminium housings
5. Polyester coating for environmental protection

---

(1) Modular design not available for DN32 (1 1/4”) actuators.

(2) Modular design not available for sizes above DN150 (6”)

(1) SiAl – Silicon-Aluminium  (2) PES – polyethersulphone  ✓ Available  ✗ Unavailable

007 Switchbox
Modular switch-boxes are available for the ES Modular actuator range. Offering a wide range of both mechanical and proximity switches as well as other options, i.e. ASi-interface.

Opti-SET
- Self setting. Minimize validation/set-up time.
- Remote, open/closed indication.
- Economical, compact, lightweight design.
- Allows for compression/set of the diaphragm.
- Easy access, even at difficult angles.
- Available with mechanical or proximity switches, including safety options.

Saunders® I-VUE
The Saunders® I-VUE is a compact intelligent valve sensor that provides accurate and reliable valve position feedback. It is suitable for EC or ECX actuated valves. Key Features and Benefits:
- Available as Point-to-Point or with network capabilities (ASi & DeviceNet)
- Highly accurate electronic sensing technology to continuously monitor valve position.
- Self Setting (without entry) feature that facilitates setting and programming of switch without opening the enclosure.

ES Positioner
Provides precise control of the flow through the valve. This long life corrosion resistant range suits a wide variety of applications with reliability and accuracy. Available as pneumatic electro-pneumatic intrinsically safe and explosion proof, together with a variety of feedback options. A digital option is also available.

Mini Positioner
For control application on the EC actuated valve, Saunders offers both pneumatic, electropneumatic and digital inputs with sensor feedback option and linear mounting design providing a compact control solution.

MODULE Switchbox
This module switchbox option is available for EC & ECX actuator ranges. The switchbox offers a wide range of mechanical and proximity sensors with space for up to 4 switches, integral solenoid valve & ASi interface*.

*Semi interface can be retrofitted.

Solenoid valves
A wide range of locally mounted banjo solenoid valves can be fitted to the Saunders actuator range with a manual override option and various hazardous area classifications. The solenoid range is designed to cover all requirements.

Other control options available upon request.
Please, contact Saunders for more information
